

Honorables Framework Addendum

Settlement, Resource Quality, and Equipment Philosophy

Core Philosophy:

Honorables is not loot-driven but civilization-driven. Exploration creates opportunities, classes increase efficiency, infrastructure realizes potential, and the settlement is the primary engine of progression.

Key Principles:

- Classes increase probability, not exclusivity.
- Discovery belongs to the player.
- Civilization creates power.
- Resource quality represents latent production potential.
- Equipment quality is determined by material potential, craftsmanship, and workshop capability.
- Immersive Engineering should preserve and realize quality through production chains.
- Higher quality should primarily improve yield and efficiency rather than raw combat power.
- Glyphborn is final refinement rather than primary progression.
- Randomness creates opportunity, not progression.

Quality Pipeline:

Resource Quality -> Processing -> Intermediate Components -> Craftsmanship -> Equipment

Equipment Quality:

Limited by:

1. Material Potential
2. Craftsmanship (Traits, Abilities, Augments)
3. Workshop Capability

Canonical Economic Principle:

Classes do not create resources; they reduce waste.

Canonical Settlement Principle:

The greatest treasure is the settlement's ability to create equipment rather than equipment itself.
