

Honorables Server Subclass Reference

Revised soft-specialization tracks for the five base classes

Recompiled design reference based on the updated class loop, trait, and progression model.

Design Philosophy

Core principle. Base classes define a player’s contribution to the server’s economy, progression, and survival loop. They should not merely describe a weapon preference. Combat styles such as archery, critical hits, poisons, heavy weapons, or spellcasting should emerge from the interaction of traits, equipment quality, perks, augments, enchantments, consumables, and skill investment.

Specialization tracks. Subclasses are soft-specialization tracks, not mandatory permanent locks. Players may invest across multiple tracks, but deeper nodes should become increasingly expensive so that true specialization remains meaningful on a low-population server.

Trait relationship. Each class is primarily concerned with optimizing certain traits. These traits should guide scaling, skill requirements, and perk design, but they should not prevent off-build experimentation. A Naturalist can still fight, a Warrior can still use a bow, and a Miner can still explore; specialization determines efficiency and ceiling, not basic access.

Current Base Class Structure

Base Class	Core Gameplay Loop	Primary Trait Concerns
Miner	Acquires raw materials and transforms them into equipment, tools, and industrial infrastructure.	Strength, Intelligence, Constitution
Naturalist	Produces renewable resources through cultivation, animal systems, food, brewing, and biological processing.	Intelligence, Constitution, Dexterity
Adventurer	Discovers, maps, and unlocks world content through exploration and progression-oriented travel.	Constitution, Dexterity, Intelligence
Warrior	Masters physical combat through martial training, weapon discipline, defense, and precision.	Strength, Constitution, Dexterity
Mage	Uses magical systems to deal damage, enhance equipment, support allies, and manipulate progression through arcane power.	Intelligence, Wisdom, Dexterity

Miner

Core gameplay mechanic. The Miner supports the material economy: locating resources, extracting them, refining them, and turning them into the physical foundation of progression. Ore discovery should exist in the base Miner tree rather than being isolated in a single specialization.

Primary traits. Strength supports extraction and heavy labor. Intelligence supports forging, machine logic, and refinement. Constitution supports underground endurance and sustained mining efficiency.

Specialization	Primary Focus	Main Traits	Gameplay Role	Likely Bonuses
Blacksmith	Tool and equipment forging	Intelligence, Strength	Converts refined materials into high-quality tools, weapons, armor, and repair systems.	Equipment quality, tool forging, weapon forging, armor crafting, repair efficiency, material efficiency, recipe progression.
Quarryman	Raw extraction	Strength, Constitution	Breaks large quantities of stone, ore, and underground material quickly and efficiently.	Pickaxe speed, mining speed, ore yield, stamina efficiency, underground resistance, bulk extraction.
Engineer	Industry and infrastructure	Intelligence, Constitution	Turns raw and refined materials into machines, power systems, automation, and settlement infrastructure.	Immersive Engineering synergy, machine progression, tool efficiency, infrastructure bonuses, experience from industrial work.

Naturalist

Core gameplay mechanic. The Naturalist replaces the old Farmer base class and supports renewable production. This class owns the long-term sustain economy: crops, animals, fishing, brewing, food, poisons, and renewable biological materials.

Primary traits. Intelligence supports cultivation, recipes, and processing. Constitution supports animal handling, outdoor labor, and production endurance. Dexterity supports precision harvesting, fishing, and delicate processing.

Specialization	Primary Focus	Main Traits	Gameplay Role	Likely Bonuses
Farmer	Crops and plant cultivation	Intelligence, Constitution	Builds the settlement food base through crops, orchards, herbs, mushrooms, and plant-based materials.	Crop yield, plant growth, seed efficiency, herbal resources, natural regeneration support, farming experience.
Rancher	Animals, fishing, and aquaculture	Constitution, Dexterity	Specializes in livestock, breeding, animal products, fishing, bees, and renewable resources from living creatures.	Breeding efficiency, animal resource yield, fishing rewards, aquaculture bonuses, tamed creature support, animal handling.
Brewer	Processing, alchemy, and consumables	Intelligence, Dexterity	Converts natural output into stronger food, potions, poisons, preserved goods, and utility consumables.	Potion processing, poison production, food quality, consuming speed, fermentation, cooking bonuses, support economy bonuses.

Adventurer

Core gameplay mechanic. The Adventurer supports world progression through travel, discovery, and content access. It is not just a movement class; it helps the server locate structures, routes, biomes, ruins, and opportunities that other classes can exploit.

Primary traits. Constitution supports long expeditions. Dexterity supports traversal and recovery. Intelligence supports mapping, discovery, and route planning.

Specialization	Primary Focus	Main Traits	Gameplay Role	Likely Bonuses
Pathfinder	Travel and traversal	Constitution, Dexterity	Gets the group across difficult terrain quickly, safely, and with less resource drain.	Movement speed, sprinting speed, stamina, swimming, step height, fall reduction, expedition sustain.
Treasure Hunter	Ruins and rewards	Dexterity, Intelligence	Focuses on dangerous structures, hidden rewards, dungeon rewards, and rare discoveries without overlapping mining extraction.	Luck, structure rewards, rare loot, dungeon progression, stealth utility, discovery experience.
Cartographer	Mapping and surveying	Intelligence, Constitution	Finds useful land, maps regions, identifies settlement sites, and supports long-range planning.	Block reach, movement utility, Antique Atlas synergy, structure discovery, terrain assessment, route planning.

Warrior

Core gameplay mechanic. The Warrior owns physical combat. With Ranger removed as a base class, ranged and finesse combat are absorbed into Warrior through Skirmisher. This keeps martial expression under one class while preventing weapon choice from becoming a separate economic identity.

Primary traits. Strength supports raw power and heavy weapons. Constitution supports defense, armor, and sustained combat. Dexterity supports precision, critical hits, finesse weapons, and ranged handling.

Specialization	Primary Focus	Main Traits	Gameplay Role	Likely Bonuses
Knight	Defense and protection	Constitution, Strength	A disciplined frontliner built around armor, shields, reliable protection, and group defense.	Armor, armor toughness, melee resistance, shield play, knockback resistance, defensive stamina efficiency.
Berserker	Power and aggression	Strength, Constitution	Trades safety for heavy damage, high pressure, and sustained close-range offense.	Melee damage, heavy weapon scaling, attack speed, stamina, rage-style bonuses, sustain or life-steal hooks.
Skirmisher	Finesse and critical precision	Dexterity, Strength	Replaces the Ranger's useful combat space by specializing in agility, precision, critical hits, and flexible light or ranged weapons.	Critical chance, critical damage, draw speed, projectile velocity, attack speed, dodge/evasion, stamina efficiency, bows, crossbows, spears, daggers, thrown weapons.

Mage

Core gameplay mechanic. The Mage supports magical progression. It provides direct spell power, hybrid magical combat, support magic, and the imbue systems that make equipment perks and magical item progression central to

the server economy.

Primary traits. Intelligence supports spell power, mana systems, enchanting, and magical crafting. Wisdom supports efficiency, control, and deeper magical mastery where available. Dexterity supports casting movement, hybrid combat handling, and precise magical execution.

Specialization	Primary Focus	Main Traits	Gameplay Role	Likely Bonuses
Elementalist	Offensive spellcasting	Intelligence, Wisdom	Specializes in direct-damage magic such as fire, ice, lightning, and other elemental schools.	Spell power, elemental spell power, mana regeneration, cooldown reduction, offensive spell scaling.
Spellsword	Arcane martial hybrid	Intelligence, Dexterity	Combines weapons, self-buffs, movement magic, and close-range casting into a hybrid combat style.	Attack speed, spell power, magic resistance, mana regeneration, casting movement speed, weapon-spell synergy.
Enchanter	Imbuement and magical enhancement	Intelligence, Wisdom	Handles weapon and armor imbuement, magical perks, support magic, and equipment enhancement.	Mana efficiency, cooldown reduction, support spells, buff progression, weapon perks, armor perks, magical item improvement.

Implementation Guidance

Puffish Skills structure. Represent each subclass as a visible branch within its base class category. Avoid hard mutual exclusion unless a specific server rule requires it. Use point cost, branch depth, prerequisites, and scaling rewards to encourage specialization organically.

Quality and imbuement chain. The revised structure supports a clear production loop. Miners produce and refine materials, Blacksmiths determine equipment quality, Enchanters add magical perks or imbuelements, Naturalists provide consumables and poisons, Adventurers discover progression sites, and Warriors convert physical training into combat performance.

Ranger removal. Ranger is removed as a base class because its mechanics were better expressed as weapon builds, perks, augments, enchantments, poisons, or Warrior specialization. Skirmisher preserves the useful Dexterity-based combat identity without requiring a separate class that lacks a unique economic loop.

Balance rule. When adding a new skill, ask which gameplay loop it supports. If it supports material production, it belongs near Miner. If it supports renewable sustain or consumables, it belongs near Naturalist. If it supports discovery and world progression, it belongs near Adventurer. If it supports physical combat mastery, it belongs near Warrior. If it supports spellcasting, imbuement, or magical enhancement, it belongs near Mage.
