

Honorables Attribute Scaling Reference

Complete Attribute Alteration and Value Guide

For class trees, subclass nodes, branch penalties, KubeJS trait derivation, and Puffish Skills reward balancing.

1 Overview

The complete attribute dump includes vanilla Minecraft, AttributesLib, Legendary Survival Overhaul, Puffish Attributes, Forge, Iron's Spellbooks, UnionLib, Diet, Cataclysm, and other modded attributes. This reference defines recommended operations and value ranges for development. These values are intended as safe starting points, not final balance limits.

2 Scaling Standard

Use this as the base rule:

Element spell powers	multiply_base	0.03-0.06
Magic resistances	multiply_base	0.02-0.05

6 Attributes to Be Careful With

Attribute	Reason
<code>attributeslib:life_steal</code>	Can break sustain balance fast.
<code>puffish_attributes:life_steal</code>	Same issue.
<code>attributeslib:crit_chance</code>	Should stay low.
<code>attributeslib:crit_damage</code>	Scales burst damage hard.
<code>puffish_attributes:damage_reflection</code>	Dangerous in boss fights.
<code>irons_spellbooks:cooldown_reduction</code>	Can make spell spam too strong.
<code>minecraft:generic.movement_speed</code>	Small values matter a lot.

7 Penalty Scaling

For branch milestone penalties:

Commitment	Penalty Value
Tier 3 milestone	-0.02
Tier 5 milestone	-0.04
Tier 7 capstone	-0.06 to -0.08

Use `multiply_base` for most penalties.

```
{
  "type": "attribute",
  "data": {
    "attribute": "irons_spellbooks:max_mana",
    "value": -0.04,
    "operation": "multiply_base"
  }
}
```

For flat stats like health or armor, use small `addition` penalties instead.

8 Complete Attribute Scaling Table

9 Design Notes

- Use `addition` for flat values such as max health, armor, reach, luck, and mana pools.
- Use `multiply_base` for most class-tree percentage bonuses and penalties.
- Use `multiply_total` sparingly because it scales after other modifiers and can become very strong.
- Keep chance-based stats such as critical chance and dodge chance much lower than normal damage bonuses.
- Keep cooldown reduction, life steal, damage reflection, movement speed, and reach conservative until tested.
- Mastery nodes should usually unlock or enhance mechanics instead of granting large raw stat bonuses.
