

Honorables Server Subclass Reference

Soft-specialization subclass tracks for the six base classes

Design Note. These subclasses are intended as specialization tracks, not mandatory permanent locks. Players may be allowed to invest in multiple tracks, but deeper nodes should become more expensive so true specialization still matters on a low-population server.

Miner

The Miner subclasses split resource play into discovery, extraction, and industrial development.

Subclass	Focus	Role	Likely Bonuses
Prospector	Resource discovery	Finds and identifies valuable deposits before anyone else.	Fortune, ore discovery, cave utility, experience from rare finds.
Quarryman	Raw extraction	Breaks large amounts of stone and ore quickly.	Pickaxe speed, mining speed, stamina efficiency, resistance underground.
Engineer	Industry support	Turns raw resources into machines, infrastructure, and settlement-scale production.	Experience, tool efficiency, Immersive Engineering synergy, machine-related progression.

Farmer

The Farmer subclasses divide settlement sustain into livestock, plants, and processed goods.

Subclass	Focus	Role	Likely Bonuses
Rancher	Animals and livestock	Specializes in breeding, animal products, and tamed creature support.	Tamed damage, tamed resistance, breeding efficiency, animal resource yield.
Herbalist	Crops and healing	Builds the settlement food base while improving natural healing and support value.	Healing, natural regeneration, crop yield, plant-based resources.
Brewer	Alchemy and processing	Converts farm output into stronger food, potions, and utility consumables.	Consuming speed, experience, potion/food processing, support economy bonuses.

Explorer

The Explorer subclasses support long-range travel, profitable discovery, and settlement expansion.

Subclass	Focus	Role	Likely Bonuses
Pathfinder	Travel and traversal	Gets the group across difficult terrain quickly and safely.	Movement speed, sprinting speed, stamina, swimming, step height, fall reduction.
Treasure Hunter	Loot and ruins	Focuses on dangerous structures, hidden rewards, and rare discoveries.	Luck, stealth, dungeon rewards, rare loot, structure-based progression.
Land Surveyor	Territory and planning	Finds the best land for settlements, resource sites, roads, and expansion.	Block reach, movement, structure discovery, terrain assessment, resource-site planning.

Warrior

The Warrior subclasses separate frontline combat into defense, aggression, and holy support.

Subclass	Focus	Role	Likely Bonuses
Knight	Tank and defender	A disciplined frontliner built around armor, shields, and reliable protection.	Armor, armor toughness, melee resistance, shield play, knockback resistance.
Berserker	Aggressive melee	Trades safety for heavy damage, speed, and sustained pressure in close combat.	Melee damage, sword damage, attack speed, stamina, possible life-steal later.
Paladin	Holy warrior support	Blends durability with healing magic and group protection.	Healing, holy spell power, magic resistance, mana regen, defensive support.

Ranger

The Ranger subclasses cover hunting, precision archery, and battlefield scouting.

Subclass	Focus	Role	Likely Bonuses
Hunter	Monster specialist	Tracks and kills dangerous creatures while supporting wilderness resource gathering.	Ranged damage, tamed damage, hunting rewards, wilderness sustain.
Sharpshooter	Precision ranged combat	Focuses on powerful ranged attacks, accuracy, and high-value single targets.	Arrow damage, draw speed, projectile velocity, critical ranged bonuses.
Scout	Recon and mobility	Moves ahead of the group, avoids danger, and identifies threats early.	Stealth, sprinting speed, movement speed, detection avoidance, light survival.

Mage

The Mage subclasses split magic between destructive casting, hybrid combat, and arcane support.

Subclass	Focus	Role	Likely Bonuses
Elementalist	Offensive caster	Specializes in fire, ice, lightning, and other direct-damage magic schools.	Spell power, elemental spell power, mana regen, cooldown reduction.
Spellsword	Arcane fighter	Combines weapons, self-buffs, movement magic, and close-range spellcasting.	Attack speed, spell power, magic resistance, mana regen, casting movespeed.
Enchanter	Utility and support magic	Improves allies, equipment, and magical utility rather than pure damage.	Mana efficiency, cooldown reduction, support spells, buff-focused progression.

Implementation Guidance

Use the base class tree for broad identity, then let subclass tracks deepen that identity. Early subclass nodes should be cheap and flexible; late nodes should be expensive enough that mastering every track takes significant investment.

For Puffish Skills, each subclass can be represented as a visible branch in the same class category. If hard locks are not desired, avoid mutually exclusive requirements and instead rely on point cost, branch depth, and scaling rewards to encourage specialization.
